Professional Summary

Hybrid professional with 10+ years of experience in tech and startup environments, working across operations, support, and technical teams. Since 2022, I've transitioned into technical roles, where I focus on technical configuration, system setup, and production support, helping users work more effectively while collaborating closely with engineering teams. I act as a bridge between people and technology by configuring systems, managing access and permissions, applying logical rules to workflows, and translating business needs into clear, actionable technical requests. I value collaboration, curiosity, and continuous improvement, and I'm motivated to continue growing as a software engineer.

Technical Skills

Programming Languages: TypeScript, JavaScript, C++, Java, Go, HTML, CSS, Bootstrap,

Databases: MySQL, SQLite Queries

Documentation: Markdown, Confluence, C4M, Backstage.io, PlantUML, UML, Draw.io

Testing: Postman, Insomnia, unit testing, functional/manual QA

Tools: Git, GitHub, GitLab, Trello, Jira, Miro, Bizagi, n8n (learning), Deluge (basic), AWS Cloud (fundamentals – in progress)

Methodologies: Agile (Scrum, Kanban, Scrumban)

Other: OOP, Data Structures, SOLID, Design Patterns

Languages: Spanish (native), English (advanced), Portuguese (intermediate)

Professional Experience

Garantia Ya – Tech Support L1 / BA / Functional Tester | May 2025 – Present

- Conduct requirements gathering across business areas to identify needs, blockers, and opportunities for improvement.
- Map user journeys to uncover pain points and define measurable improvements.
- Configure user access, roles, and permissions within the Zoho CRM, ensuring correct access levels across different user profiles.
- Customize and maintain CRM configurations, including adding fields, adjusting workflows, and applying simple logical rules to support system changes.
- Provide production support by analyzing incidents, reproducing issues, and escalating them to development teams with clear context and technical reasoning.
- Work closely with engineering teams, acting as a bridge between users and developers to translate reported issues and business needs into clear, actionable technical requests.
- Prepare technical documentation, guides, and instructional materials for cross-team adoption.

Key Achievements (last 6 months):

- Identified the lack of a ticketing system and implemented a centralised workflow, enabling **90% of requirement requests** to be properly channelled and improving traceability and response efficiency.
- Reduced internal incidents by **20–30%** by mapping pain points and coordinating fixes with the development team.

- Tested and validated **80%** of new modules released, improving user adoption and satisfaction.
- Implemented and documented **75%** of previously undocumented processes, strengthening onboarding, support workflows, and cross-team alignment.

THE BRIDGE (Owner) – Trainee Software Engineer | Freelance | 2023 – Present

- Web development using HTML, CSS, JavaScript, and Bootstrap.
- QA: Functional/manual testing (web + mobile), test case analysis, test execution, bug reporting, documentation in Jira/Trello, API testing with Insomnia and Postman.
- Personal project: Developing an AI-powered mobile app for people in the early stages of Alzheimer's.

KAVAK - Product Documentation Analyst & Software Engineer | 2022

- Collaborated with platform, architecture, and engineering teams across Argentina, Brazil, Mexico, and Spain.
- Created and maintained technical documentation in GitHub and Backstage.io.
- Gathered requirements for documentation systems and evaluated tools (PlantUML, Swagger, C4M).
- Designed documentation standards, templates, and diagrams to improve clarity for engineering teams.
- Conducted API testing and supported developer experience initiatives.

Key Achievements (Servicing Vertical):

- Created and maintained 80% of the documentation for the projects in which I was involved within the Servicing vertical, improving clarity and standardisation across teams.

Tech Talent Acquisition Specialist – Team Leader | 2021 – 2022

- Led one of three core teams during hypergrowth, scaling from 180 to nearly 800 tech employees.
- Managed end-to-end hiring for all seniority levels in tech and product.
- Introduced tools and processes to support team scaling, including feedback frameworks and structured 1:1s.
- Contributed to career path design and talent development calibration panels.
- Implemented onboarding/offboarding strategies that reduced attrition below 10%.
- Led ATS optimisation projects (Greenhouse) to improve reporting and data-driven hiring.
- Negotiated complex compensation packages, supported critical decisions, and enhanced employer branding.

Featured Projects

2024 – [Maki Web Project](#): Web development for a Talent professional. Techs: Bootstrap, HTML, CSS, JS.

2024 – [Task List](#) (Academic Project): Task management app with TypeScript + Unit Testing. Applied: OOP, Data Structures, SOLID, Design Patterns.

2025 - [DriveHub car rental system](#) (Academic Project): with TypeScript + Unit Testing. Applied: OOP, Data Structures, SOLID, Design Patterns.

Education

UTN (2024 – Present) – Associate Degree in Programming and Systems Analysis

UNSTA (2005 – 2009) – Bachelor's Degree in Psychology
